Как это работает

```
const Cell = styled.div`  
  display: table-cell;  
  padding: 10px;  
  background: rgba(255,105,180, ${props => props.value});  
`;
```

Как это работает

Babel plugin

```
const Cell = styled.div`  
  display: table-cell;  
  padding: 10px;  
  background: rgba(255,105,180, ${props =>  
    props.value});  
`;
```

Babel plugin

```
const Cell = styled('div')({  
  name: 'Cell',  
  class: 'Cell_cjdc1ue',  
  vars: {  
    'cjdc1ue-0': [props => props.value],  
  },  
});
```

Babel plugin

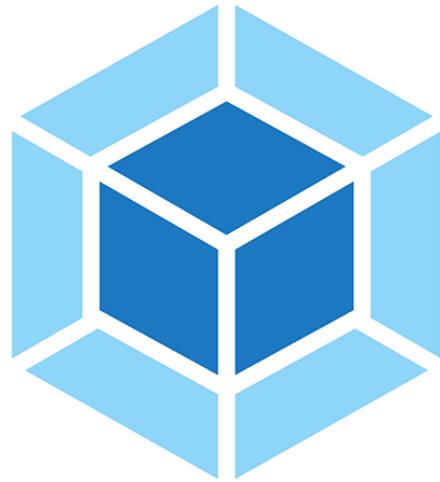

--cjdc1ue-0: 0.6038

```
.cjdc1ue {  
  display: table-cell;  
  padding: 10px;  
  background: rgba(255,105,180,var(--cjdc1ue-  
0)));  
}
```

Babel plugin

```
<div value="0.9017" class="cjdc1ue" style="--cjdc1ue-0:0.9017;">90.17%</div>

My biggest technical decision mistake in last 6 months was to go forward with [#linaria](#) for [#cssInJs](#)... So much time wasted...    What's yours? [#tech](#) [#fuckups](#)

Слабые стороны

Martin Hochel
@martin_hotell

В ответ @lukeed05

- doesn't work in monorepo
- compilation is super slow (we were experiencing 5-10 minutes build because of this)
- overall this project has low priority from maintainers
- latest version 1.4 was supposed to fix those issues -> outcome => doesn't work at all.

and so on...

СПАСИБО

The slide title goes here!

Do you know what helps you make your point clear? Lists like this one:

- Because they're simple
- You can organize your ideas clearly
- And because you'll never forget to buy milk!

And the most important thing: the audience won't miss the point of your presentation.

Maybe you need to divide the content

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

You could use three columns, why not?

MARS

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust, which gives the planet its reddish cast

JUPITER

It's a gas giant and the biggest planet in our Solar System. Jupiter is the fourth-brightest object in the sky

MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System. It's only a bit larger than our Moon

A picture always reinforces the concept

Images reveal large amounts of data quickly, so remember: use an image instead of long texts. Your audience will appreciate that

A picture is worth a
thousand words

Awesome words

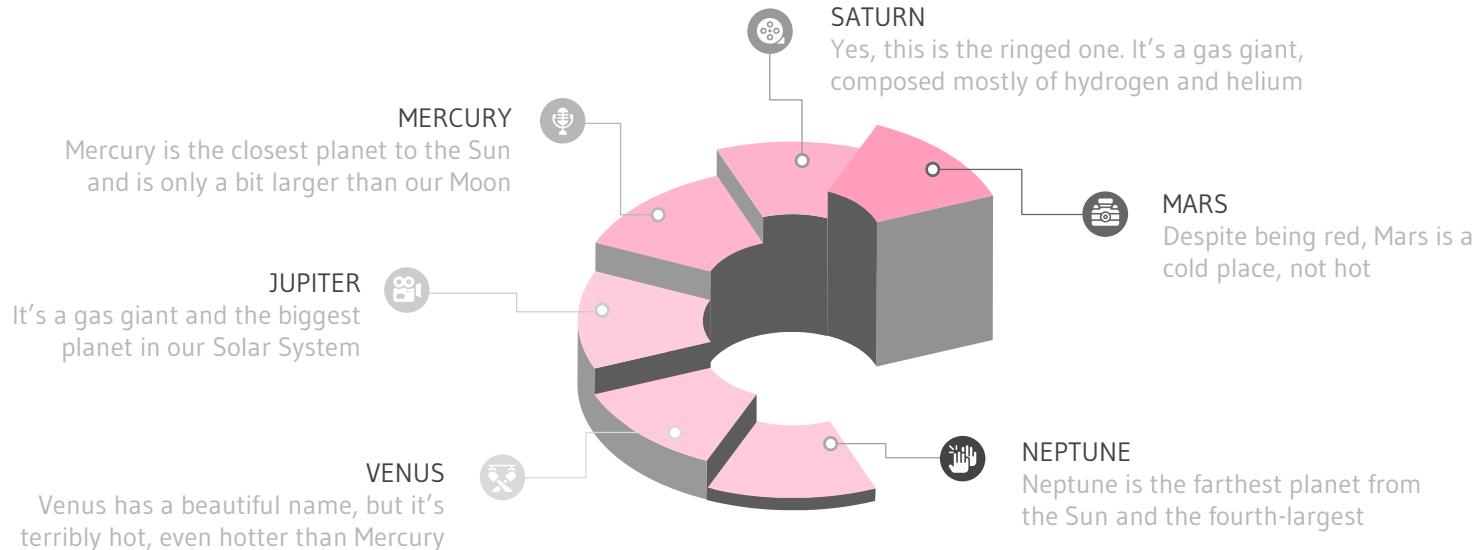

Because key words are great for catching your audience's attention

Section 1

This is the subtitle that makes it
comprehensible

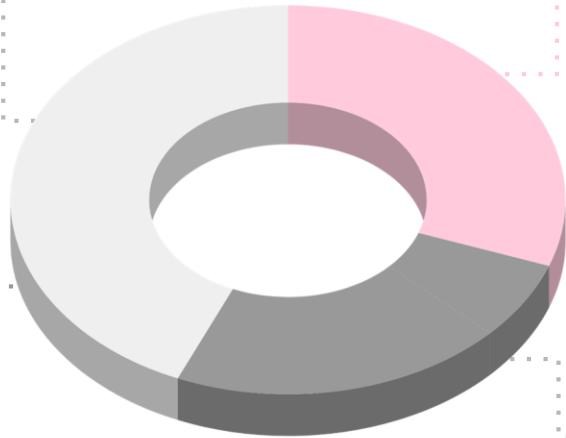

В чём преимущество

Insert smart graphs from Google Sheets!

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

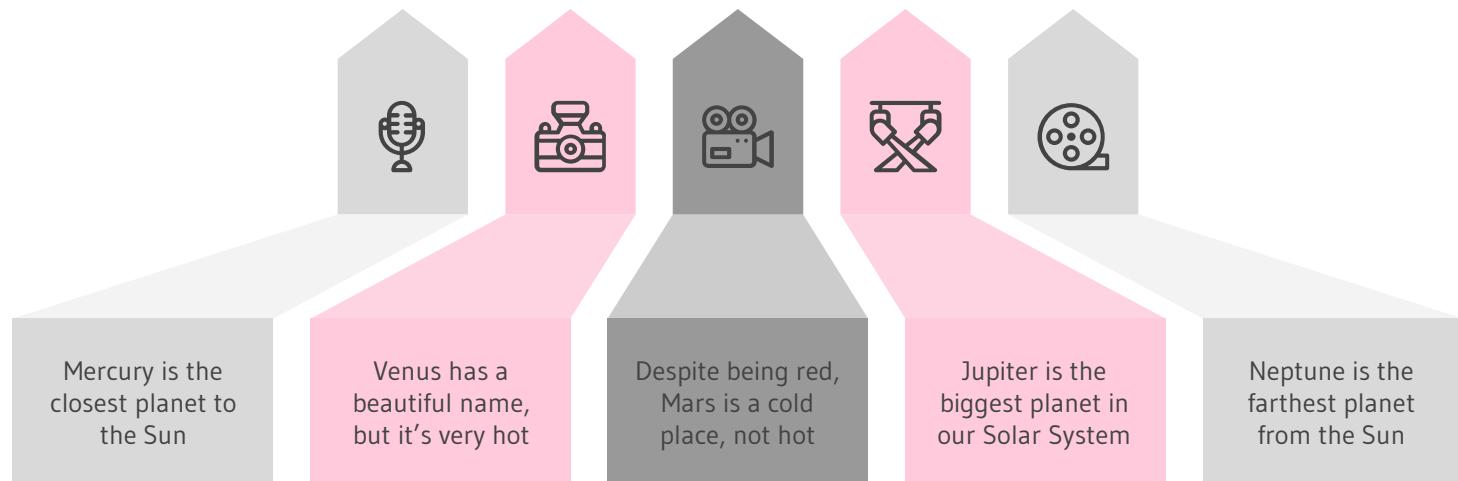

Saturn is composed mostly of hydrogen and helium

If you want to modify this graph, click on it, follow the link, change the data and replace it here

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust

Jupiter is a gas giant and the biggest planet in our Solar System

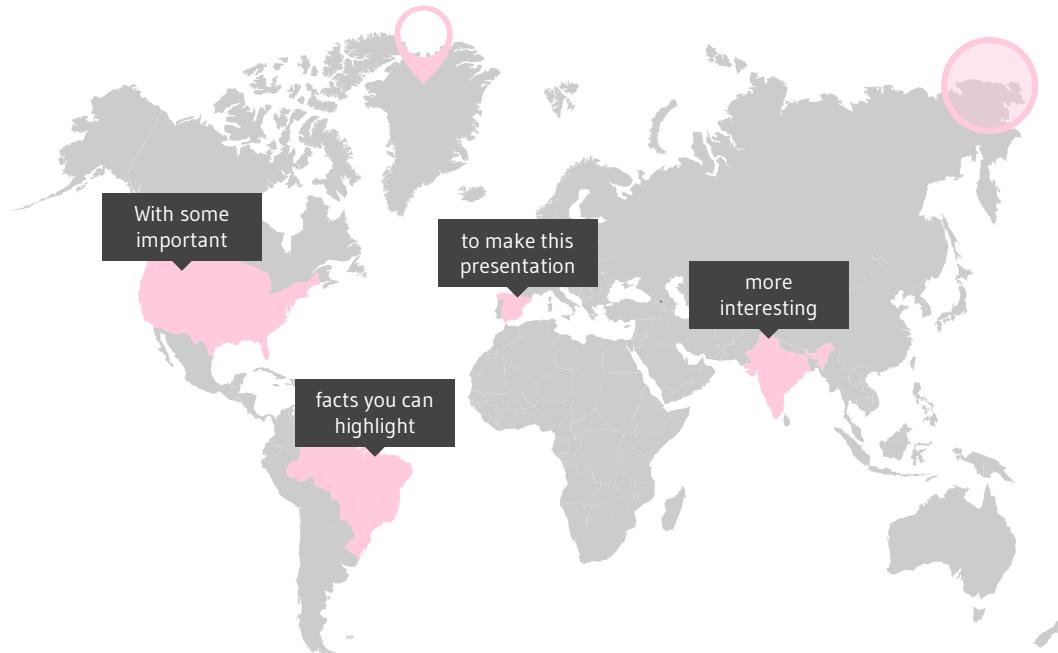

Infographics make your idea understandable...

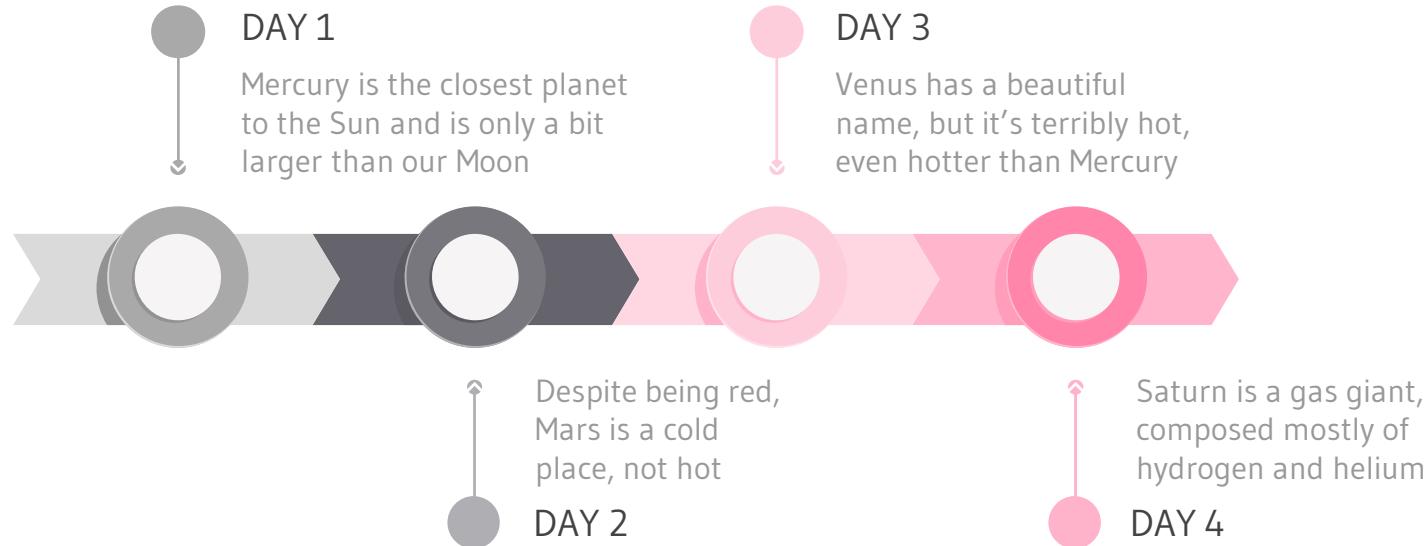

Так что же в 2020

	Длительность рендеринга (ms)

Styled-components	95,2

This is a map

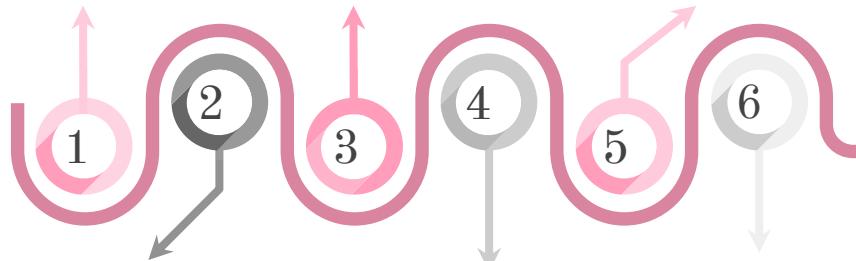

A timeline always works fine

Do you prefer this one?

Saturn is a gas giant,
composed mostly of
hydrogen and helium

Venus has a beautiful
name, but it's terribly hot,
even hotter than Mercury

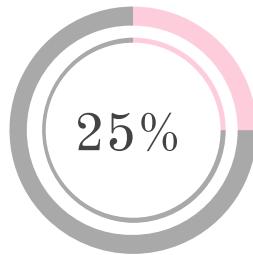

Neptune is the
farthest planet
from the Sun

Despite being red,
Mars is a cold place,
not hot

Mercury is the closest planet
to the Sun and is only a bit
larger than our Moon

Jupiter is a gas giant and
the biggest planet in our
Solar System

How about the percentages?

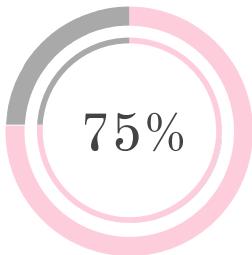

MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

JUPITER

It's the biggest planet in our Solar System and also the fourth-brightest object in the sky

4,498,300,000

Big numbers catch your audience's attention

24h 37m 23s

is Jupiter's rotation period

333.000,00

earths is the Sun's mass

386,000 km

is the distance between the Earth and the Moon

Sometimes, reviewing concepts is a good idea

MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

JUPITER

It's a gas giant and the biggest planet in our Solar System

VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

SATURN

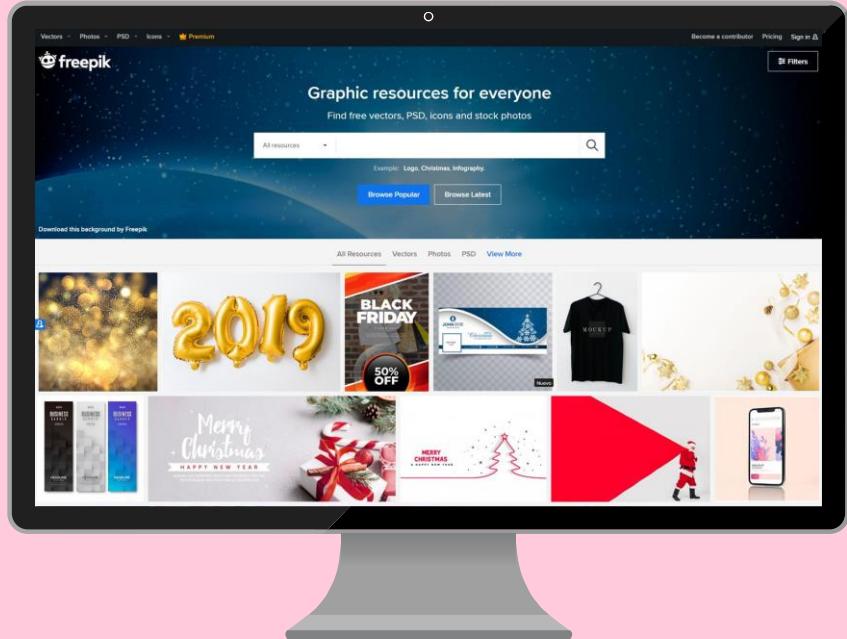

Yes, this is the ringed one. It's a gas giant, composed mostly of hydrogen and helium

MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

NEPTUNE

Neptune is the fourth-largest planet by diameter in our Solar System
